Dear students,

Recently, environmental protection has become a crucial issue, which draws much attention of the public. Next Friday our school will hold an activity about environmental protection.

One effective method recommended is to transform the way of travelling around. Make public vehicles your prior choice of transportation. It not only exerts positive effects on the environment, but also gives you much convenience. Furthermore, saving electricity as well as water is another small action which makes a great difference. It reduces the waste of resources, contributing to the sustainability of the society. Last but not least, try to use environment-friendly shopping bags when purchasing in the market in order to avoid plastic pollution.

Living a low-carbon life can be beneficial to the society, so join in this activity and take action from now on to make the world a better place.
