Be Smart on Smartphones

Nowadays, students have their own smartphones, which have a certain impact on their study and life. Considering the harm that mobile phones may bring to students, some schools advocate a complete ban on students bringing them to school.

In my opinion, as a student, our major task is to learn as much knowledge as we can at school. We should concentrate our time and energy on study, but some students may listen to music, play games and send messages with their mobile phones in class. I am not against having a mobile phone, but I think that students should not be allowed to use mobile phones in class.

All in all, we should use mobile phones in a more smart and flexible way.
